Riad osman

Software Engineer | Web developer

riyados973@gmail.com   **Turkey, Istanbul**

Objective

In a rapidly evolving world, I believe continuous learning is the only way to stay relevant. As a software engineering student, I work every day to improve myself, knowing that every long journey begins with a single step. I'm not looking to follow — I'm striving to be someone worth following.

Skills

Frontend : Web Basics React.js Next.js TypeScript Shadcn/ui Tailwindcss Socket.io

Backend : Node.js Express.js MongoDB

Tools : N8N Figma Basics Microsoft Office Docker Git/Github

Experience

Morlines Media : 6/2023 ～ 9/2023

I worked as a frontend developer. It was my first opportunity to work with a team, and actually my first job. The company was a startup working on many things like digital marketing, social media, and design. I met some very nice people there. However, I had to leave because my 12th-grade school started. Still, I continued working on some of their projects for a short time afterward.

180 degree : 4/2025 ～ Present

I am currently working with this company as a web developer and, at the same time, interning in software engineering. I have learned a lot about AI, including LLMs, RAG models, AI agents, and how to integrate them into real projects and websites using the n8n tool.

Education

Bachelor of Software Engineering (in progress)

Gedik University, Istanbul — Expected graduation: 2028
